

If clean energy
could speak,
what would it
say?

Find out on
October 23rd at
the 1st Annual
NEXUS-NY
Demo Day

Over the past nine months, from the selection of the initial 12 clean energy research teams from across New York State to the eight teams expected to present at the NEXUS-NY Demo Day, the teams have made great progress toward three primary objectives:

- Validation of product-market fit
- Development of proof-of-concept prototypes
- Obtaining third party validation of their technologies and business models

As the teams present their clean energy innovations and plans at the first NEXUS-NY Demo Day, the fruits of their labors - funded in part by grants from NEXUS-NY and NYSERDA - will no doubt pique the interest and inspire any and all who are interested in what the future of clean energy may look like.

If you are a clean energy scientist/researcher/student, an entrepreneur, an investor, or just about anyone else with an interest or stake in new approaches to clean energy, the NEXUS-NY Demo Day in Rochester is for you.

See and hear from NEXUS-NY teams working in

- advanced batteries
- bio-fuels
- fuel cells
- building materials
- demand response systems
- sensors
- solid-state lighting
- other clean energy initiatives

NEXUS-NY Demo Day

Thurs., October 23, 2014
